

Open Data Day

Celebrating ten years of open
data in Connecticut

March 7, 2024

**Thank you to Tyler
Technologies for
sponsoring the Open
Data Day breakfast!**

Agenda

Opening remarks

Scott Gaul, OPM, and special guest
Tyler Kleykamp

1

Open Connecticut: Transparency in CT state government

Yamuna Menon, OSC

5

Open data portal update: Highlights and focus areas

Pauline Zaldonis, OPM

2

Meet the vendor: Tyler Technologies

David Marcus, Tyler Tech

6

GIS Office update: Geodata Portal and upcoming data

Alfredo Herrera, OPM

3

Meet the Vendor: Esri

Matt Deal & Krithica Kantharaj, Esri

7

FOIA and open data

Russell Blair & Nick Smarra, FOIC

4

Telling your story with open data

Rachel Leventhal-Weiner, OPM

8

Ten years of open data in Connecticut

In 2014, Governor Malloy signed Executive Order 39 to:

- Launch data.ct.gov
- Call on agencies to publish data within 90 days
- Create the Open Data Advisory Council

STATE OF CONNECTICUT
BY HIS EXCELLENCY
DANNEL P. MALLOY
GOVERNOR
EXECUTIVE ORDER NO. 39

CONNECTICUT
SECRETARY OF THE STATE
CAPITOL OFFICE
2014 FEB 20 A 10:27

WHEREAS, timely and consistent publication of public information and data is an essential component of an open and effective government;

WHEREAS, the State of Connecticut possesses vast amounts of information relating to health, business, public safety, labor and more;

WHEREAS, new information technology has changed the way people search for information, and such technology can aggregate larger quantities of data than ever before;

WHEREAS, making even more data available to the public will allow developers to create helpful applications, researchers to make use of data that was previously difficult to obtain, and facilitate information sharing between state agencies;

WHEREAS, creating a state open data portal further Connecticut's commitment to transparency, efficiency, social progress, and economic expansion;

NOW, THEREFORE, I, Dannel P. Malloy, Governor of the State of Connecticut, by virtue of the authority vested in me, do hereby **ORDER** and **DIRECT**:

1. **Definitions**

- "Agency" means any executive branch agency led by a department head appointed by and serving at the pleasure of the Governor;
- "Chief Data Officer" means the state Chief Data Officer as further specified in this order, who shall be within the Office of Policy & Management;
- "Connecticut Open Data Portal" means the internet site established and maintained by or on behalf of the State of Connecticut, located at data.ct.gov or its successor website;
- "Data" means final versions of statistical or factual information that:

03/31/2014

Gov. Malloy Launches Data.CT.Gov to Give Public Unprecedented Amount of Access to Government Data

(NEW HAVEN, CT) - Governor Dannel P. Malloy launched Data.CT.gov, Connecticut's new government data to be collected, placed online to increase government efficiency and transparency so residents can use for any number of purposes. New Haven firm that has created a company to help governments to track, manage and analyze data.

"We launched this website to as part of our commitment to open and easily accessible to its owners."

Governor Dannel P. Malloy will create a new agency to oversee the state's data from transparency to the Republican Party.

GOVERNMENT

Connecticut moves openly toward more data transparency

by CT Mirror Staff

March 3, 2014 @ 12:21 pm

Governor Dannel P. Malloy speaks at an open data conference at the Hartford Public Library. CT MIRROR

Why open data?

Promote open
and effective
government

Facilitate data
sharing between
agencies

Make it easier for
developers to
make helpful
applications

Promote
transparency,
efficiency, social
progress, and
economic
expansion

Open data in 2024 and beyond

Curating the
data published
on the Portal

Integrating with
other state data
efforts

Improving the
user experience
on the Portal

Making data on
the Portal more
accessible
through data
visualization and
storytelling

State Data Plan goals

- 1 Improve access to data
- 2 Support agency data and analytics capacity
- 3 Using data to inform decision-making

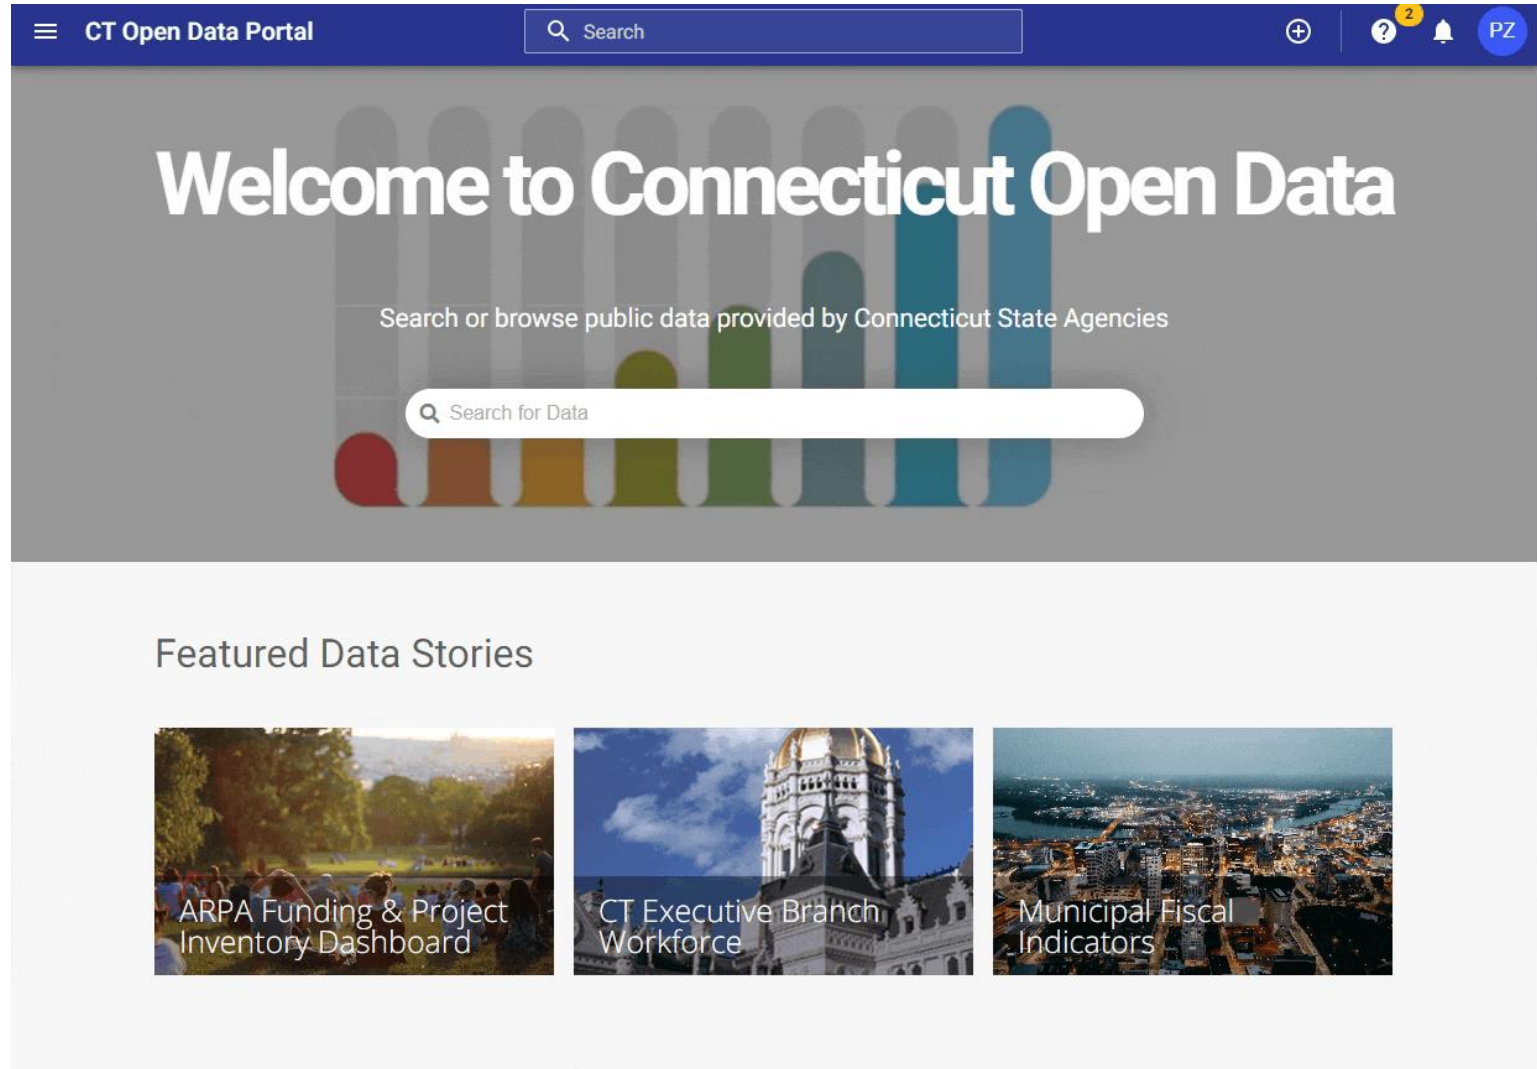

Due for an update soon!

Open data portal update: Highlights and focus areas

CT Open Data Portal

Connecticut's repository for open data published by state agencies

Provides open access to machine-readable data about state government

Open data by the numbers

The OPM Data and
Policy Analytics
Division...

...work with about
170 data publishers
and editors across
state agencies

...to provide access
to data to over 185k
users every year!

~170
editors and
publishers

185,000+
users in the last year*

*User data from Google Analytics, April 2023-February 2024

Slide inspiration: <https://moda-nyc.github.io/2023-OpenDataReport/open-data-by-the-numbers.html>

What's on the Portal?

557

Datasets

37

Data stories

44

Maps

137

Filtered views

102

Charts

587

Federated assets

Dataset views on the Portal decreased slightly over the last two years, from a high of 71k in January 2022

The most viewed datasets included data on medical marijuana, employment statistics, and tax revenue.

Dataset views, 2022 - present

Most viewed datasets, 2023

Dataset downloads have increased over the last two years, with a high of 35.5K downloads in October 2023

The most downloaded datasets included data on casino slot revenue, real estate sales, and Connecticut businesses

Downloads, 2022 - present

Most downloaded datasets, 2023

API calls have increased over the last two years, with a high of 7.5M calls in December 2023

The datasets with the most API calls included data on state licenses and credentials, pensions, and the state budget

API calls, 2022 - present

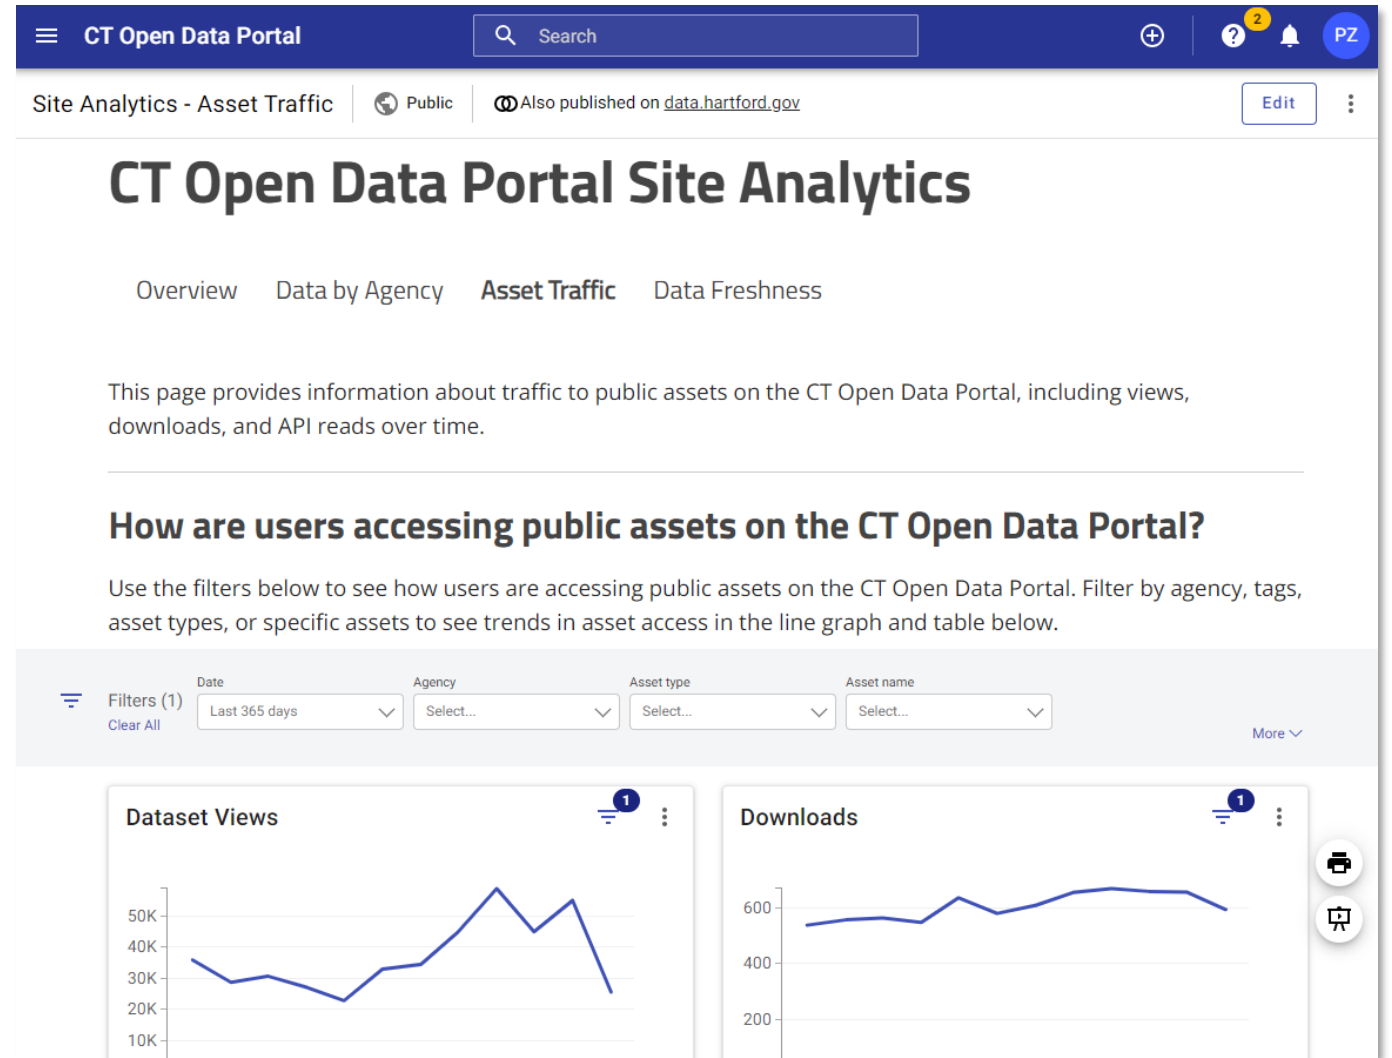

Datasets with most API calls, 2023

See more analytics in the site analytics data story

- Assets by agency
- Popular assets
- Views, downloads, API reads over time
- Data freshness

- School Immunization Survey

Focus areas

Ensuring data is up-to- date

Progress has been made in making sure data on the Portal is current, but some old assets still need updating

Eighty percent of datasets on the Portal have been updated in the last five years

Twenty percent of datasets haven't been updated since 2019 or earlier

Improving metadata on the Portal

Metadata update in August-September 2023 focused on metadata quality and completeness to improve the usability of data on the Portal

Metadata completeness on the Portal improved greatly in 2023

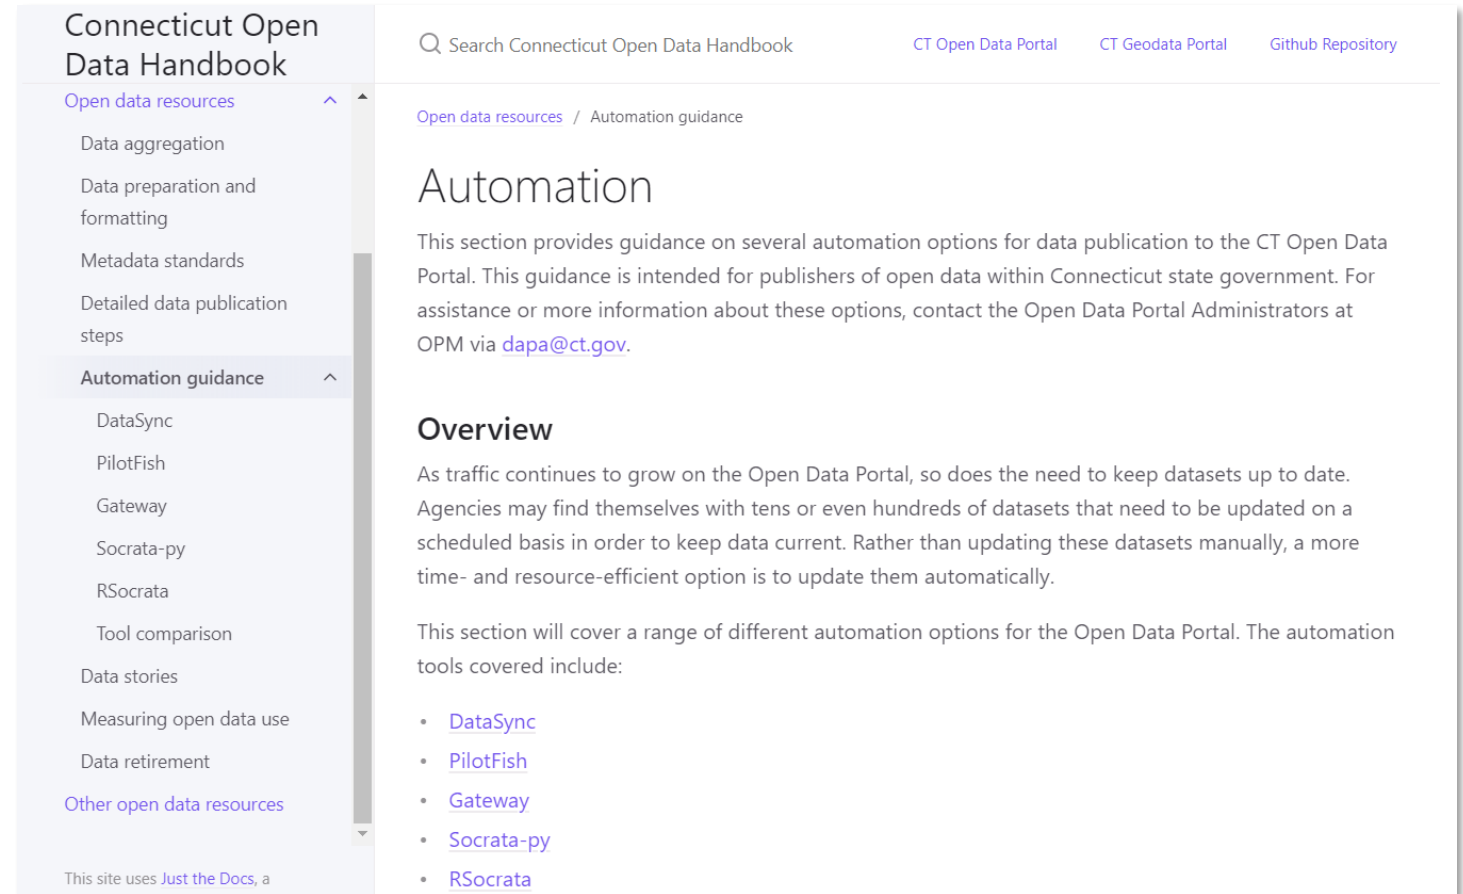

31

Only 19% of datasets are missing any piece of metadata, down from 94% in August 2023.

Increasing automated updates

Increase the number of datasets that are updated automatically instead of manually

The screenshot shows the 'Connecticut Open Data Handbook' website. The left sidebar contains a navigation menu with the following items: 'Open data resources' (with a sub-menu: 'Data aggregation', 'Data preparation and formatting', 'Metadata standards', 'Detailed data publication steps'), 'Automation guidance' (with a sub-menu: 'DataSync', 'PilotFish', 'Gateway', 'Socrata-py', 'RSocrata', 'Tool comparison', 'Data stories', 'Measuring open data use', 'Data retirement'), and 'Other open data resources'. The main content area is titled 'Automation' and includes an 'Overview' section. The overview text states: 'As traffic continues to grow on the Open Data Portal, so does the need to keep datasets up to date. Agencies may find themselves with tens or even hundreds of datasets that need to be updated on a scheduled basis in order to keep data current. Rather than updating these datasets manually, a more time- and resource-efficient option is to update them automatically. This section will cover a range of different automation options for the Open Data Portal. The automation tools covered include: DataSync, PilotFish, Gateway, Socrata-py, RSocrata'.

Guidance on automation is in the **Open Data Handbook** at <https://ctopendata.github.io/open-data-handbook/>

Publishing new data

Work with agencies to
publish new data on
the Portal

New data could include:

- Data that is frequently requested by the public or other agencies
- Data that is already being published on a regular basis elsewhere (e.g. in an Excel spreadsheet, PDF, or other report)
- Data that is considered high value by your agency

Increasing the accessibility of content on the Portal

Develop processes and resources to improve the accessibility of data visualizations, data stories, and other content

CT Open Data

Data Visualization Accessibility Guidelines

Introduction

This document outlines guidelines for creating accessible data visualizations. Analysts and developers should prioritize accessibility from the start of the design process and should consider hearing, motor, cognitive, and visual accessibility. Use these guidelines as a starting place for designing accessible data visualizations.

Data

Data visualizations and dashboards aim to help users gain insight into data. Many data visualizations will work for some users but will be inaccessible to others. This section highlights steps we can take to make our data accessible to all users.

1. Provide access to the data in an accessible table format.

Making the data available in an accessible table format provides an alternate format for consuming the data for users who may find the visualization inaccessible (for example, some non-visual users may find a table to be easier to navigate with a screen reader.)

If you use the data visualization tool on the CT Open Data Portal, the visualization will automatically be available as a chart and a table. Using this data visualization tool is an easy way to ensure your data is available in an accessible table format.

If you use a data visualization tool that does not automatically generate a table (e.g. Microsoft Power BI, Tableau, Dataviz, etc.), you may need to create a table and add it to the dashboard yourself.

When creating a table to include in your dashboard, make sure to format the table to make the data easy for users to understand. A few guidelines for formatting tables include:

- Name your columns clearly
- Sort the table by importance to your users
- Structure the table intuitively
- Avoid blank cells, which can be unclear and confusing for users

1

Guidance document

Accessibility in Data Visualization Checklist

Web Accessibility Checklist

The following checks can be used to review the accessibility of data story pages or other websites where data visualizations are embedded. This checklist was adapted from the [A11y Project's WCAG Compliance Checklist](#). WCAG refers to the Web Content Accessibility Guidelines developed by the World Wide Web Consortium (W3C).

Content

- ☐ **Use plain language** and avoid figures of speech, idioms, and complicated metaphors. Avoid excessive use of acronyms and make sure to spell out the acronym the first time you use it.
- ☐ **Use descriptive and unique link names.** Avoid phrases like "click here" or "read more" since they do not provide any context; instead, use language that indicates what will happen if navigated to or activated.
- ☐ **Avoid using center-aligned or justified text**, which can be difficult to read. Use left-aligned text for left-to-right languages, and right-aligned text for right-to-left languages.

Code

If using html content in your data story page,

- ☐ **Validate your HTML** to provide a consistent, expected experience across all browsers and assistive technology. Check your html using a tool like the [Nu Html Checker](#).
- ☐ **Use a lang attribute on the html element to declare the default language of the text in the page.** This helps assistive technology such as screen readers to pronounce content correctly. For example: `<html lang="en">`.
- ☐ **Provide a unique title for each page or view.** Make sure you include a title element within the documents head element. This is often the first piece of information announced by assistive technology and will help orient users to the content they are going to start navigating. For example: `<head> <title>Unique and Descriptive Page Title</title> </head>`

GIS Office update: Geodata Portal and upcoming data

GIS Office Responsibilities

- **GIS data coordination.** Coordinating the collection, compilation, and dissemination of GIS data across the state, including from and to state agencies, regional councils of governments, municipalities, and other constituencies;
- **Open data.** Managing a publicly accessible geospatial data clearinghouse;
- **Supporting economic development.** Using GIS to support economic development efforts in the state;
- **Outreach & training.** Provide training and outreach on the use of GIS;
- **Orthoimagery.** Administering a statewide orthoimagery and lidar program;
- **Guidance & Standards.** Adopting geospatial data standards, guidelines, and procedures;
- **Data processing.** Performing technical data processing to aggregate and organize existing datasets and create new datasets; and
- **Broadband mapping.** Develop broadband data and mapping in accordance with Public Act 21-159.

[New & Noteworthy](#) | [CT at a Glance](#) | [Data Categories](#) | [Partners](#)

Geodata Portal Highlights

<https://geodata.ct.gov>

ArcGIS Hub based GIS Clearinghouse built in collaboration with Esri.

The Geodata Portal shares partner agency data to make it available all in one place.

The site has been live for over a year! Updates occur periodically.

Reviewed other states' clearinghouses and synthesized results as part of preliminary preparation work.

How did we launch with so much stuff?

- Prior to the creation of the Geodata Portal, there were several other “authoritative” state sites for GIS data.
 - CT ECO
 - DEEP
 - DOT
 - CT Open Data Portal*
- One of the stated goals and needs of the CT GIS community is to have a centralized place to find geospatial data.
- A plan to aggregate state agency data was needed.
- The CT Open Data Portal was used as a model.

* The Open Data Portal was federating to some of the existing portals, but not all.

Getting Agency Data into the Portal

Challenges to aggregation:

- Inconsistent metadata implementation (some use ISO, FGDC, etc.).
- Agencies sometimes had diverging needs and uses for the data.
- ArcGIS Online orgs needed some preparation and standardization.

Despite these challenges, the key stakeholders involved ensured the success of the effort.

Special thanks to:

- *Greg Ciparelli (DOT)*
- *Stuart DeLand (DEEP)*
- *Emily Wilson (UConn CLEAR)*
- *Pauline Zaldonis (OPM DAPA)*

Contributing to the Portal

Reach out to the GIS Office to contribute data.

- opm.giso@ct.gov

Some preparation is required.

- Guidance document for contribution coming soon.
